

## Projekty Pilotażowe

### **PP 3 + PP 1 – Municipality of Wiśniow and the University of Agriculture in Krakow**

The Municipality of Wiśniowa with contribution of the University of Agriculture in Krakow as an element of project activities prepared indispensable documentation and restored a small historical retention basin significant in terms of historical and cultural heritage as well as local landscapes assets. Restoration works were conducted at the site of the former rubble basin, created in the 1960s, which by the end of the 20<sup>th</sup> century had completely silted up as a result of numerous floods. The basin was reconstructed in the form of a shallow reservoir. It changed its functional role. It is used for the needs of recreation and tourism.

Another significant aspect is the restoration of proper water management in the area, that is water storage for the needs of agriculture and fire protection. Moreover, the reconstruction of water basin helped restore local ichtyofauna, mainly the disappearing fish species and reinstated fishing tradition.
